# Practical - 2

## Practical Title: Semantic HTML5 Pages with Accessibility-Ready Structure

Problem Definition: Develop static HTML5 skeletons for at least 10 StudentHub pages such as Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, FAQ, and Feedback. Use semantic tags and accessibility-friendly structure.

## Theory

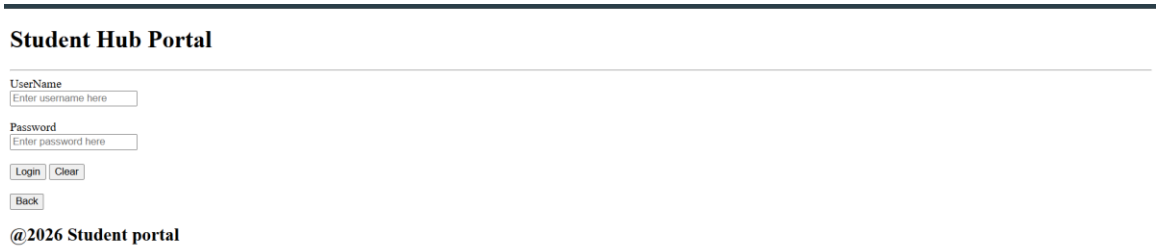

Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?
Answer: Yes, semantic tags like <header>, <nav>, <main>, <section>, and <footer> are used to organize the webpage and improve readability.

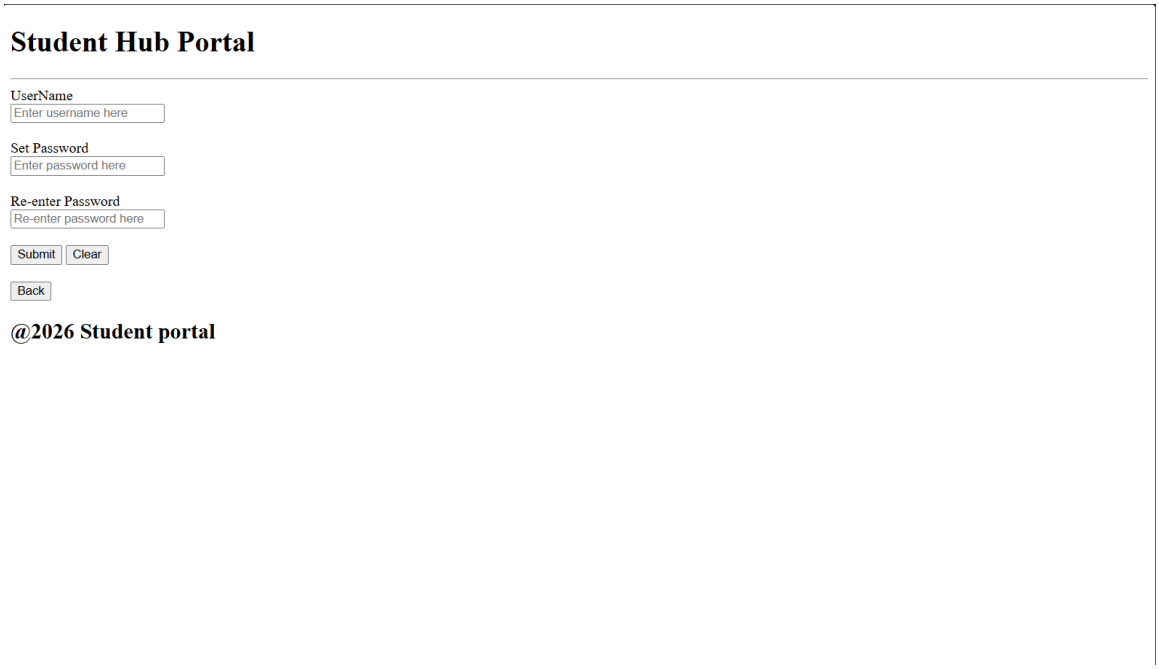

Are form labels, headings, image alt text, and navigation links accessible?
Answer: Yes, forms use proper labels, headings follow a clear hierarchy, images include alt text, and navigation links are easy to access.

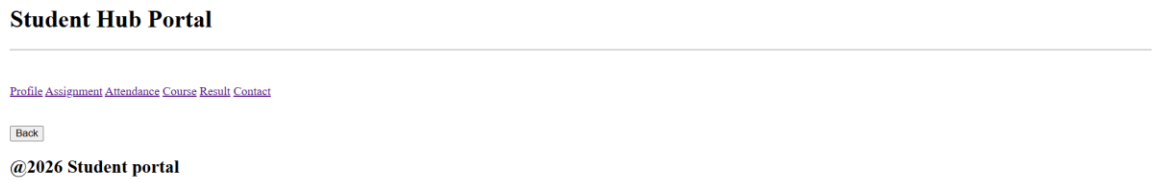

Is the page structure consistent across all pages?
Answer: Yes, all pages follow the same layout with a common header, navigation bar, main content area, and footer, providing a consistent user experience.

## GitHub Repository Link:

https://github.com/ShyamPatel9/Student-Hub-Portal

## Challenges Faced:

Used semantic HTML tags correctly.

Fixed navigation and page structure issues.

## Learning Outcomes:

Learned semantic HTML5.

Improved webpage structure and accessibility.

Created consistent layouts for multiple pages.

## Faculty Remarks: **(Keep this blank for faculty)**
